Enquiries:

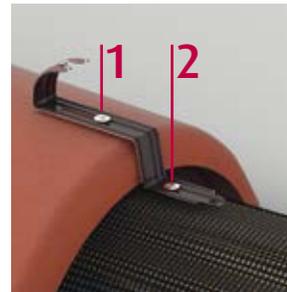

What must be considered when using FOS ridge clips following the technical regulations of the German roofer confederation?

The ridge tiles must withstand a windload of 0.60 kN per meter.

Clips and screws must be corrosion-resistant.

Screws have to be at least 4.5 mm thick and provide a minimum penetration of 24 mm into the substructure.

Fixing the ridge clip:

1. with a screw through the ridge tile
2. with a screw into the substructure

Conclusion:

Your benefits from using FOS ridge clips:

- ✓ Wide range of shapes
- ✓ Wide range of colours
- ✓ Allocations for all common ridge- and hip tiles on our website: www.fos.de
- ✓ Small packaging units
- ✓ Quality Made in Germany

Reliable uplift resistance against wind load. Almost invisible on the roof.

Installation

FOS ridge clips allow a permanently secure connection of a hip or ridge tile to the substructure. It secures continues air circulation of the ridge.

Ridge clips, available in various forms, enable a quick and simple assembly of the ridge or hip on the roof.

Large variety of ridge clip shapes

A large variety of shapes enables us to offer a suitable clip for almost any ridge or hip tiles (clay or concrete) on the market. The correct FOS ridge clips allocations for ridge- and hip tiles can easily be done on our website www.fos.de.
